EDUCATION AND CAREER PATH

Cal Poly Humboldt - Arcata, CA Expected to graduate May 2028

Bachelor of Science, Computer Science

Third-year student attending Cal Poly Humboldt in Arcata, California, interested in full-stack development and AI. Main skills include strong motivation to learn and improve, capable of working independently and with groups of people, a desire to troubleshoot and understand problems, as well as finishing tasks once they have been started.

- **GPA: 3.94** - Achieved the Dean's List for every term as well as earning Presidential Scholar awards (top-tier academic honor, 3.95+ GPA threshold)
- **Relevant coursework:** took classes involving Systems Programming, Data Structures, Web Apps Using Databases, Database Design, Computer Architecture, and Discrete Mathematics

TECHNICAL SKILLS

- **Languages & Tools:** Python (FastAPI), JavaScript/TypeScript, C++, SQL, React, Node.js, Git/GitHub, and Terraform
- **AI/ML:** Developing skills by building projects involving Full-stack GenAI development, Retrieval-Augmented Generation (RAG), real-time AI response streaming, AI diffusion pipelines (TouchDesigner and ComfyUI), PGVector, Supabase, Alembic, and understanding neural network fundamentals
- **Languages:** Fluent in English with Spanish-speaking capabilities

TECHNICAL PROJECTS

Learning Engine - Hackathon for Social Good - Spring 2026

- Working together with a four-person team, I helped to build a full-stack study tool that lets instructors add unique quiz content by editing plain JSON files, which require no coding background on their end.
- Helped to write the setup guide as a walkthrough in plain-language for professors with little to no Computer Science experience, and helped to identify and track down a database bug during the event's final crunch time.

RAG Document Q&A Tool - Summer 2026

- Working on extending an open-source FastAPI and React starter code project by adding the real-time AI streaming layer as well as the data model working underneath it (users, chats, citations, and documents) using Supabase, PGVector, and Alembic.
- Applied the pipeline to a financial-research scenario that includes a citation of the source page with every answer so the information can be verified and confirmed.

LeetCode Grind 75 - Summer 2026

- Worked through all 75 LeetCode problems included in Grind75 independently, which further built hands-on fluency working with the data structures and patterns that are used daily in production, coding, and engineering.

PROFESSIONAL EXPERIENCE

Cal Poly Humboldt Library - Library Scholar Intern, Terraform Project - Feb–May 2026

- Rebuilt the library's AR topology sandbox simulation from scratch on new hardware and software, which replaced the older, gradient-based version. This new simulation uses a Kinect depth camera feeding an AI diffusion pipeline (using TouchDesigner and Daydream's StreamDiffusion) onto a sand table, which had early architecture guidance from a diffusion-modeling team in Amsterdam.
- Wrote the entire project's setup documentation in simple terms so that future student scholars can pick it up without guidance. We would also regularly translate technical setbacks into plain language for non-technical project managers.
- Helped to diagnose problems with the architecture as a team and coordinate with IT teams and project managers to resolve issues; the code and documentation were released under an MIT license crediting our team as authors.

Ramy Dickinson Construction - Contractor Apprentice - Summer 2023–Present

- Handling materials, logistics, and daily site operations in a fast-paced small business, often making real-time decisions without a manager present.

LEADERSHIP & COMMUNITY

President of the Spanish National Honor Society - organizing meetings and community initiatives, while using bilingual skills to bridge English- and Spanish-speaking members together.

100+ volunteer hours - across the Veterans' Hall, Volunteer Trail Steward program, and Trinidad Coastal Land Trust- I maintain a sustained commitment to my home and local community.
